HOBBIES

Photography

Swimming

Running

After my experience in the construction industry, I attended the 6-month Full-Stack Web Development course at Workitech in order to direct my career in the field of software development, which I have been interested in for a long time. During this time, I took an active role in more than 50 projects and increased my practical knowledge and experience in software development.

My goal is to work in positions where I can continuously improve myself and adapt to innovations in the software development industry. I am looking for an environment where I can contribute by using my knowledge and competencies at the highest level.

SKILLS

Front End: Javascript, React.js, Hooks, Context API, Redux, Axios, Yup, Jest, Cypress, HTML, CSS, Tailwind Css,

Back End: Java, OOP, Data Structures, Design Patterns, Maven, Spring Core, Spring Boot, Spring Data JPA, Spring Security, SQL, PostgreSQL, JUnit, Mockito, Git, .Net

Additional: Algorithms, Debugging, Deployment, Problem Solving, Figma, Teamwork

SOFTWARE PROJECTS

Ecommerce Clone, Frontend Developer - React | TS

I've created an e-commerce clone enabling users to register an account and sign in. Users can select products for purchase, view detailed product information and prices in their cart, proceed to payment, and access saved addresses and credit cards or add new ones. To explore the website, you can log in using the credentials: customer@commerce.com with the password: 123456.

For the application, I employed React and TypeScript, utilized Redux Toolkit for efficient state management, integrated the Infinite Scroll component to dynamically load more products as users scroll down, managed routes with React-Router, gathered user information using React-Hook Form, and utilized Toastify for effective user notifications.

Personal Website, Frontend Developer - React | TS

I have developed a personal blog utilizing TypeScript, React, and Tailwind for its implementation. To manage state within the application, I opted for the Context API, while for retrieving data from an external API, I integrated Axios. Additionally, to ensure user engagement and effective communication, I employed the Toastify library for notification purposes

Order Pizza, Frontend Developer - React | JS

In this project, I've developed the UI for a pizza website. The homepage features a button that directs you to place a pizza order. Upon clicking, it takes you to a page with a pizza order form where you can choose the size, thickness, and extra ingredients. As you make selections, the form instantly updates to show the price changes.

To develop this project, I utilized JavaScript and React for implementation. The form was created using HTML elements, and for form validation, I employed the YUP library.

EDUCATION

2023-2024 **WORKINTECH - FULL STACK DEVELOPMENT**
Program (6 months - 960 hours - 78 projects)

2013-2019 **MIDDLE EAST TECHNICAL UNIVERSITY**
Civil Engineering / Bachelor's Degree

2009-2013 **BAYBURT SCIENCE HIGH SCHOOL**

WORK EXPERIENCE

2023 - 2021 **Co-Founder**
ALANYA-ANTALYA
I subcontracted reinforced concrete works in the company we established as three civil engineers in the city of Antalya.

2021 - 2020 **Site Engineer**
ABN Construction / Venezuela
I worked as a field engineer on the renovation project of Hotel Alba in Caracas, Venezuela
